

**CONTENTS**

|                                                                                                                                                                                             |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b><i>M. Abbas, Y.I. Suleiman, and C. Vetro</i></b><br>A simulation function approach for best proximity point and variational inequality problems . . . . .                                | 3   |
| <b><i>A. Abbasi and A. Ramin</i></b><br>An extension of total graph over a module . . . . .                                                                                                 | 17  |
| <b><i>Ghasem A. Afrouzi, John R. Graef, and Saeid Shokooh</i></b><br>Multiple solutions for Neumann systems in an Orlicz-Sobolev space setting                                              | 31  |
| <b><i>Gholamreza Aghamollaei and Mohammad Ali Nourollahi</i></b><br>Some results on the joint higher numerical ranges and radii of matrices . .                                             | 47  |
| <b><i>Muhammad Usman Ali, Fahimuddin, Tayyab Kamran, and Erdal Karapinar</i></b><br>Fixed point theorems in uniform space endowed with graph . . . . .                                      | 57  |
| <b><i>Margareta-Eliza Balazs</i></b><br>A Maia type fixed point theorem for Prešić-Kannan operators . . . . .                                                                               | 71  |
| <b><i>Sh. Banaei, M. B. Ghaemi, and R. Saadati</i></b><br>An extension of Darbo's theorem and its application to system of neutral differential equations with deviating argument . . . . . | 83  |
| <b><i>Rovshan A. Bandaliyev</i></b><br>Compactness criteria in weighted variable Lebesgue spaces . . . . .                                                                                  | 95  |
| <b><i>S. Bazine, A. Aliouche, and F. Ellaggoune</i></b><br>Common fixed point theorems on spaces with vector-valued $b$ -metrics . .                                                        | 103 |
| <b><i>V. E. Berezovski, S. Bácsó, and J. Mikeš</i></b><br>Diffeomorphism of affine connected spaces which preserved Riemannian and Ricci curvature tensors . . . . .                        | 117 |

**CONTENTS**

|                                                                                                        |     |
|--------------------------------------------------------------------------------------------------------|-----|
| <b><i>Barkat Ali Bhayo, Riku Klén, and József Sándor</i></b>                                           |     |
| New trigonometric and hyperbolic inequalities . . . . .                                                | 125 |
| <b><i>M. Bombardelli, L. Nikolova, and S. Varošanec</i></b>                                            |     |
| Unified treatment of fractional integral inequalities via linear functionals . . . . .                 | 139 |
| <b><i>T. P. Calci, S. Halicioglu, and A. Harmanci</i></b>                                              |     |
| A Generalization of $J$ -Quasipolar Rings . . . . .                                                    | 155 |
| <b><i>Miguel Couceiro and Gerasimos C. Meletiou</i></b>                                                |     |
| On a special class of median algebras . . . . .                                                        | 167 |
| <b><i>Ayhan Dil and Mirac Cetin Firengiz</i></b>                                                       |     |
| Shifted Euler-Seidel matrices . . . . .                                                                | 173 |
| <b><i>Melánia-Iulia Dobrican</i></b>                                                                   |     |
| Coupled and tripled fixed point theorems on a metric space endowed with<br>a binary relation . . . . . | 189 |
| <b><i>Radim Hošek</i></b>                                                                              |     |
| Walks in path graph on four vertices and Fibonacci sequence . . . . .                                  | 199 |
| <b><i>Yun Hua</i></b>                                                                                  |     |
| Bounds for the arithmetic mean in terms of the toader mean and other bi-<br>variate means . . . . .    | 203 |
| <b><i>Gürhan İçöz and Bayram Çekim</i></b>                                                             |     |
| $q$ -analogue of Mittag-Leffler operators . . . . .                                                    | 211 |
| <b><i>Levent Kargin and Veli Kurt</i></b>                                                              |     |
| On generalized two-index Hermite matrix polynomials . . . . .                                          | 223 |

**CONTENTS**

|                                                                                                                                                                                       |     |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>Refik Keskin and Merve Güney Duman</b><br>A note on some Diophantine equations . . . . .                                                                                           | 235 |
| <b>E. Kılıç and H. Prodinger</b><br>Closed form evaluation of Melham's reciprocal sums . . . . .                                                                                      | 251 |
| <b>Emine Koç and Öznur Gölbaşı</b><br>Multiplicative generalized derivations on Lie ideals in semiprime rings II .                                                                    | 265 |
| <b>Bülent Köklüce and Müberra Gürel</b><br>Representation numbers by sums of quadratic forms $x_1^2 + x_1x_2 + x_2^2$ in<br>sixteen variables . . . . .                               | 277 |
| <b>Đorđe Krtinić and Marija Mikić</b><br>Note on asymptotical behavior of solutions of Emden-Fowler equation and<br>the existence and uniqueness of solution of some Cauchy problem . | 285 |
| <b>A. R. Fiuj Laali and H. Haj Seyyed Javadi</b><br>Spectra of some special bipartite graphs . . . . .                                                                                | 295 |
| <b>Diffalah Laissaoui, Fouad Bounebirat, and Mourad Rahmani</b><br>On the hyper-sums of powers of integers . . . . .                                                                  | 307 |
| <b>G. M. Mahmoud and M. E. Ahmed</b><br>Analysis of chaotic and hyperchaotic conservative complex nonlinear systems                                                                   | 315 |
| <b>I. Martinjak and I. Vrsaljko</b><br>On polynomial identities for recursive sequences . . . . .                                                                                     | 327 |
| <b>Mohammad Vahdani Mehrabadi, Shervin Sahebi, and Hamid H. S. Javadi</b><br>On a generalization of NC-McCoy rings . . . . .                                                          | 337 |

**CONTENTS**

***Dijana Mosić***

On the Moore–Penrose inverse in rings with involution . . . . . 347

***M. Nunokawa, H. M. Srivastava, N. Tuneski, and B. Jolevska-Tuneska***

Some Marx-Strohhäcker type results for a class of multivalent functions . . . 353

***Süleyman Öğrekçi, Adil Mısıır, and Aydın Tiryaki***

On the oscillation of second-order nonlinear differential equations with  
damping . . . . . 365

***M.A. Özarslan, R. Srivastava, and C. Kaanoğlu***

Certain families of multivariable Chan-Chyan-Srivastava polynomials . . . 379

***H. N. Özgen***

On equivalence of two integrability methods . . . . . 391

***Páll-Szabó Ágnes Orsolya***

Modified Hadamard product properties of certain class of analytic func-  
tions with varying arguments defined by Ruscheweyh derivative . . . 397

***Ákos Pintér and Csaba Rakaczki***

On the decomposability of linear combinations of Euler polynomials . . . 407

***Ravinder Krishna Raina and Janusz Sokół***

Some coefficient properties relating to a certain class of starlike functions . . 417

***Shafiq Ur Rehman***

A note on a characterization theorem for a certain class of domains . . . . 427

***A. Rontó, M. Rontó, and N. Shchobak***

On boundary value problems with prescribed number of zeroes of solutions . . 431

**CONTENTS**

***B. Şahin***

Generic Riemannian maps . . . . . 453

***Elif Tan and A. Bulent Ekin***

Some identities on conditional sequences by using matrix method . . . . 469

***Jitka Vacková***

On the solvability of boundary value problems for some nonlinear systems  
of ordinary differential equations on  $\mathbb{R}_+$  . . . . . 479

***Hasret Yazarlı***

Permuting triderivations of prime and semiprime rings . . . . . 489

***Monika Zakany***

Fixed point theorems for local almost contractions . . . . . 499

***Chang-Jian Zhao and Mihály Bencze***

Brunn-Minkowski inequality for  $L_p$ -mixed intersection bodies . . . . . 507

***Hou Yu Zhao and Michal Fečkan***

Pseudo almost periodic solutions of an iterative equation with variable co-  
efficients . . . . . 515

***Milan Lj. Zlatanović, Svetislav M. Minčič, and Vladislava M. Stanković***

New integrability conditions of derivation equations in a subspace of asym-  
metric affine connection space . . . . . 525
